

Artifacts Archiving

SCDS proposes advanced digitization methodologies for 3D graphical archiving and international promotion of museum artifacts. Our archiving approaches allow for complete digital information storage on multiple database configurations, most of them in graphical formats.

Features and Performance:

- o High level of details and accuracy
- o Huge volume of data collected
- o User-friendly visualization, navigation and manipulation of both raw data and elaborated 3D models
- o Creating detailed and accurate spatial models
- o Rapid and effective methods of collection and modeling
- o Application-oriented workflows

Efficient Solutions for:

- o Configuration management of large sets of artifacts
- o Creation of descriptive information structures
- o Information access, communication and dispatching/sharing
- o Visualization
- o Filtering, sorting and searching
- o Conservation based on specific analysis of deterioration rate
- o Virtual reconstruction of missing parts

Available Export Formats:

- o DXF/DWG, IGES, STEP, STL
- o ASCII
